

# Performance Audit of the National Health Insurance Program

WGEPPP Forum

September 26, 2022

Bern, Switzerland

## Background

NHIP – aims to provide health insurance coverage and ensure access to cost effective and quality health care for all Filipinos

- Contributions direct from workers in the government and private entities
- Indirect contributions from the government for poor families, elders and PWDs

## All Case Rate Payment Scheme

Philhealth

**Benefit Schedule** - List of covered illnesses and the corresponding fixed coverage.

- Fixed amount of reimbursement per illness regardless of actual cost of treatment
- To improve the efficiency of the delivery of medical services provided by the HCIs

Patient visits accredited Hospitals for treatment.

Philhealth-accredited doctor identifies the illness and treats the patient.

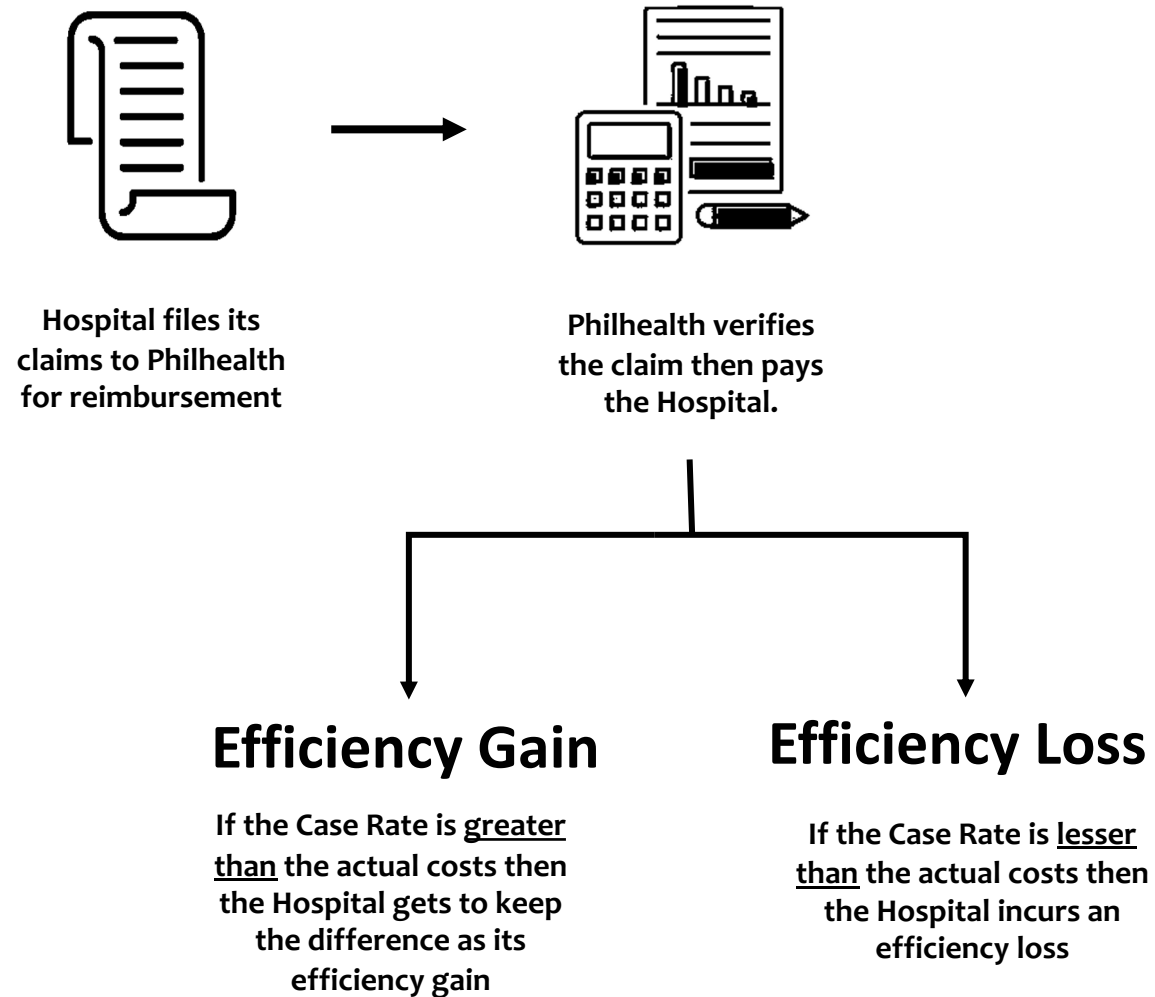

Hospital computes the bill. If the illness is covered, the Case Rate is deducted from the bill.

Patient pays the bill. If the Case Rate is greater than the actual cost, then its free. If not, then there will be an out of pocket expense.

Patient is discharged from the hospital.

# Results of the Audit

## Performance Audit Report

PAO-2020-01

### **NATIONAL HEALTH INSURANCE PROGRAM**

*The All Case Rate (ACR) Payment Scheme Sped Up the Reimbursement Process for Health Care Institutions (HCIs) but Existing Control Mechanisms Have Been Deficient and Underperforming in the Prevention and Detection of Improper Payments*

The turn-around time for Hospital  
Reimbursements was reduced from  
**55 days to 19 days**

Code	Description	Case Rates
<b>C. Inpatient Management/Care</b>		
C19IP1	Mild pneumonia in the elderly or with comorbidities	43,997.00
C19IP2	Moderate pneumonia	143,267.00
C19IP3	Severe pneumonia	333,519.00
C19IP4	Critical pneumonia	786,384.00

Scenario: critical pneumonia

**₱786,384.00**

Case Rate for Critical  
Pneumonia

**₱600,000**

Actual Costs

**₱186,384**

Since the case rate is higher than the actual costs, the hospital gets to keep the difference as efficiency gains

## From 2014 -2020

Total Claims:

**61.25 Million**

Total Amount Involved:

**₱665.28 Billion**

Efficiency Gains:

**₱41.91 Billion**

Excluded claims due to

**29.04 Million**

Data integrity issues:

## Existing control mechanisms:

- Medical Pre-payment Review (MPR), Medical Post-Audit Review (MPAR) and Payment Benefit Notice (PBN)
- Insufficient manpower and lack of strategies to mitigate effects of deficiencies in the design and performance of controls
- Only 29% (252K/879K) review of target claims for MPR
- Only 19 % (3.2M/16.48M) post audit of target claims for MPAR
- Low awareness on PBN

## **Main recommendations:**

- **conduct the mandated annual review of the case rates to ensure that the amount of efficiency gains is within reasonable level.**
- **Revisit and revise policy by taking into consideration the option of adopting the reimbursement of claims to HCIs based on whichever is lower between the case rate and the actual cost of health intervention**
- **Address deficiencies in the control design and ensure controls are working effectively in the existing controls**
- **Formulate sampling plan for the efficient review and post audit of claims**

## Methods Used in the Audit

- Use of big data analysis and information technology resources
- Administration of online survey questionnaires
- Online interview and meeting
- Desk review

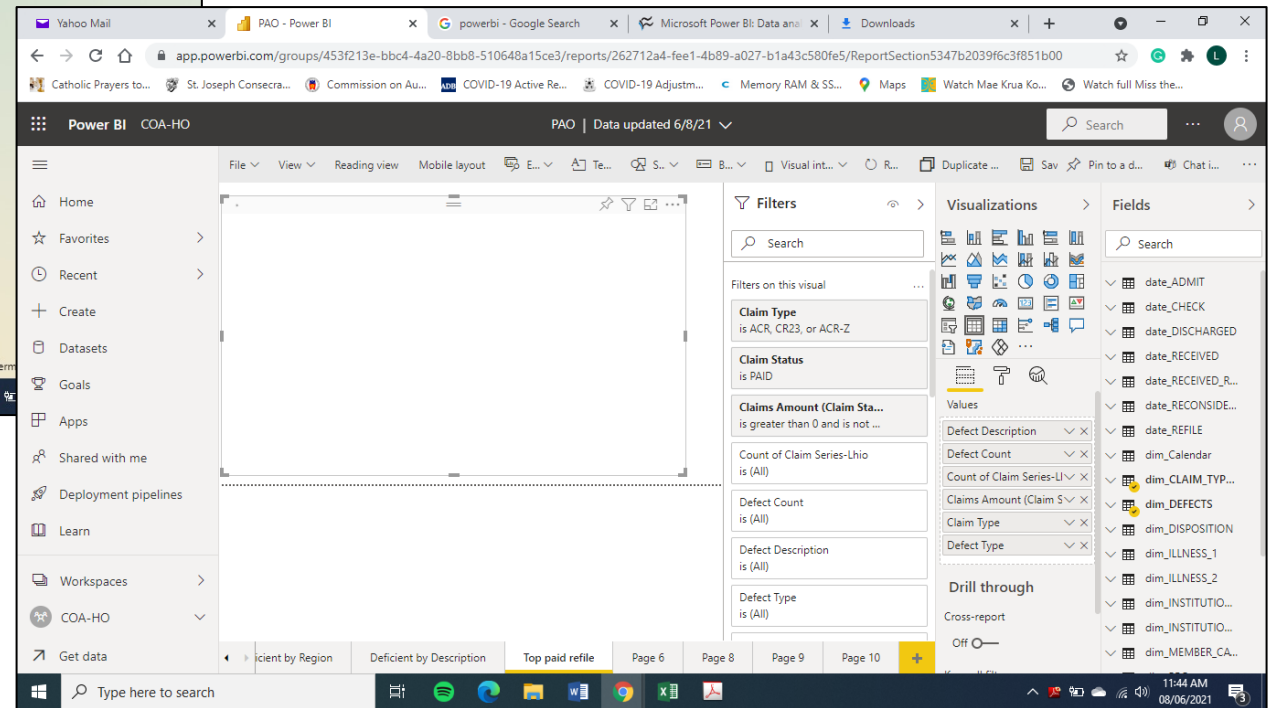

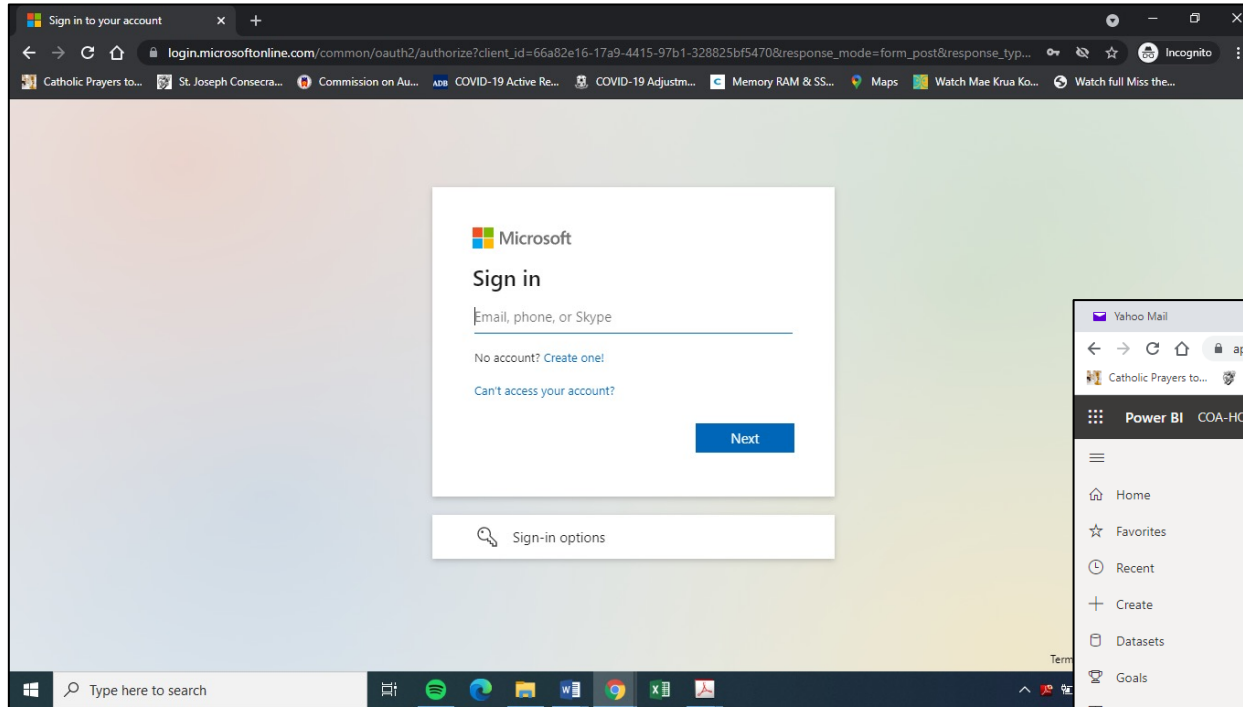

## Use of big data analysis and information technology resources

- Enabled the audit team to synthesize large amounts of data (more than 61 million claims in the database) and with fragmented information systems and data bases
- Creation of multi-disciplinary performance audit team to include Information Technology (IT) Auditors
- Remote access to the information system and database during work from home because of lockdown due to COVID-19

## Use of big data analysis and information technology resources

- IT auditors performed system evaluation and used SQL for data extraction and analysis from different databases
- IT auditors were able to train/coach the performance auditors on how to extract data using the Microsoft Power BI
- Longer time to extract data due numerous parameters, large volume of data and slow internet as auditors were working from home
- Auditors had to limit or modify some parameters to extract data

The screenshot displays a Power BI report interface with a data table. The table has the following columns: Claim ID, Check, Institut, Institut, Admit Date, Admit, Discharged, Check Date, Illness, Illness Desc, Memb, Sum of, Sum of, CA-AA, CA-AA, CA-AA, CA-AA, Institut, Is With, Claim S, and Check f. The data rows include various claim numbers and details, such as '20033004', '2020 LUIS HORZ CAR', and '2020-02-06'. A filter menu is open over the table, showing options like 'Export data', 'Show as a table', and 'Sort descending'. The table is currently filtered to show a value of 14000.

## Use of big data analysis and information technology resources

- The ability to extract specific data sets helped the performance auditors in their analysis and development of audit findings
- Employing big data in public sector auditing in line with 2019 Moscow Declaration to make better use of technological advancement and data analytics in audits

## Administer online survey questionnaires

- Survey to gauge the level of awareness HCIs and beneficiaries on the Case Rate Payment Scheme; readiness of HCIs to implement the Scheme; issues encountered in the implementation of Scheme
- To avoid face-to-face interactions due to COVID-19 pandemic

## Administer online survey questionnaires

- Low response rates from sample respondents; email addresses and mobile numbers not updated/valid
- Replacement of sample respondents and assistance of audited agency in following up the responses of respondents
- Survey results cannot be used to project the extent of the condition to the whole population

# Administer online survey questionnaires

- Administering survey questionnaires in person to obtain responses based on sample size

Commission on Audit  
Republic of the Philippines

**Thank you!**
